RHODE ISLAND.

## PREFACE.

OBJECT—The study of Nature's handiwork is second only to the study of the CREATOR of Nature.

America is slowly awaking to the fact that it is far wiser to know something of the world we inhabit, than it is to amass fortunes. When we were boys not a single acquaintance could name a given plant, bird, mineral or insect.

Books were scarce and very expensive

The boy of to-day has far greater opportunities. However, instead of calling his attention to birds, (for that inevitably results in killing the birds and robbing their nests) we desire to introduce to him a Kingdom whose study requires care, accuracy, neatness and best of all close observation.

OUTLINE.—In Europe ENTOMOLOGY is taught in the public schools, consequently text books are common and cheap. In America, the Agricultural Colleges seem to be the class most interested in this study. It follows as a natural consequence that the work of each is bounded by state lines.

New Jersey (Prof. J. B. Smith) certainly leads both as to quantity and quality of work done. Prof Smith's revised list gives in the order COLEOPTERA—71 Families, 975 Genera and 2845 Species, but it should be borne in mind that N. J. is about seven times the size of Rhode Island, also that Texas has 81 counties as large if not larger than our whole state.

It is our intention to reissue this check list annually, adding cuts, data and description as fast as it can be obtained, also to correct errata. To do this at the least expense the new Linotype machine is employed.

It is printed on one side only, so that it may be cut up and used as labels for local collections.

AID.—The Rhode Island Entomological Society was the nucleus in which this idea originated.

A list of the officers and members is here given, with abbreviations used in this checklist.

### ACTIVE MEMBERS.

President, Wm. Dearden, (Dn.)

### HONORARY MEMBERS.

Prof. A. S. Packard, (Pkd)  
Brown University.  
Prof. G. W. Field, (F)  
Massachusetts Institute of Technology.  
James M. Southwick, (S)  
Curator, R. W. Park Museum.  
A. O'D. Taylor, (T)  
Curator Newport N. H. Museum.

OTHER AID—Very little collecting has been done in Newport, Block Island, Bristol, Westerley, Cumberland and Woonsocket; and R. I. Teachers are requested to help collect bees, flies, and all kinds of insects. The necessary information as to how it may be done, can be obtained by writing to the Secretary.

Every specimen should have exact data and be in perfect condition.

EXPLANATORY—It is not intended to include in this check-list any species of uncertain identity, or records lacking necessary date and locality. (Rhode Island insects of any order will be determined by members of the society the specimens so determined to become the property of the member who identifies them.)

The order COLEOPTERA is arranged and numbered according to Henshaw's check-list including third supplement.

First and last dates only are given.

Rare—1 to 3 specimens.

Occ.—3 to 50 specimens.

Com.—50 to 500 specimens.

Abun.—Over 500 specimens.
